How much does a French vertical cable tray cost

Overview

Price List Cable Tray 2024 - Free download as PDF File (.pdf), Text File (.txt) or view presentation slides online.

Key Takeaways

The cost of a vertical cable tray in France typically ranges from €15 to €50 per meter, depending on material, type, and installation complexity.

Price Overview

The price of a vertical cable tray depends primarily on the material and design: Steel (Hot-Dip Galvanized): Common for indoor and general-purpose use, costing approximately €15–€25 per meter for standard ladder-type trays. Aluminum: Lightweight and corrosion-resistant, ideal for outdoor or humid environments, typically €20–€30 per meter. Stainless Steel: Used in highly corrosive or hygienic environments, such as food plants or coastal areas, costing €30–€50 per meter.

Wire Mesh (Cablofil type): Flexible and cost-effective, often used in data centers or offices, generally on the lower end of the price spectrum.

Factors Affecting Cost

Tray Type: Ladder, perforated, or solid-bottom designs influence both material usage and price. Length and Height: Standard lengths are around 2. 4 meters, but vertical trays may require custom heights, affecting cost.

Installation Complexity: Vertical installations may require additional supports, brackets, and labor, increasing the total project cost. Environmental Requirements: Outdoor or corrosive environments may necessitate hot-dip galvanization or stainless steel, raising the price.

French Manufacturers

Several reputable manufacturers supply cable trays in France: EAE Electric: Offers durable ladder and perforated trays for industrial and telecom applications. Cablofil (Legrand Group): Specializes in wire mesh trays, lightweight and easy to install. Gewiss: Provides Mavil trunking systems, known for durability and versatility.

Brilltech Engineers: Supplies customized solutions including PVC, mild steel, and stainless steel trays.

Summary

For budgeting purposes, a vertical cable tray in France can cost €15–€50 per meter, with steel being the most common and cost-effective, aluminum slightly higher, and stainless steel the premium option. Additional costs for fittings, supports, and installation should also be considered, especially for vertical runs in industrial or outdoor settings.
