10 Gigabit Single-Mode Dual-Core Fiber Optic

Overview

optical transceiver sfp+ 10g single mode module 1310nm 10km lcThe 1310nm LC Interface 10G Singlemode Dual-fiber Optical Module is the workhorse of the mode.

Key Takeaways

For a 10GbE single-mode dual-core fiber link, use one fiber for transmitting (TX) and the other for receiving (RX), cross-connected between devices, typically via SFP+ modules or media converters.

Connection Overview

A dual-core single-mode fiber uses two separate strands: one for TX and one for RX. Each end of the link must have the fibers cross-connected: TX on Device A → RX on Device BRX on Device A → TX on Device B This ensures proper signal flow and full-duplex 10GbE communication. The fiber ends are usually labeled TX and RX, and a duplex LC patch cord is commonly used for the connection.

Hardware ConsiderationsSFP+ Modules: Use 10GBASE-LR SFP+ modules for single-mode fiber. These support distances up to 10 km on standard SMF (G. 652) and plug directly into 10GbE switch ports or media converters.

Media Converters: If connecting copper Ethernet to fiber, a 10GbE media converter with dual SFP+ slots can be used. One slot handles the TX fiber, the other the RX fiber. Duplex vs BiDiDuplex (dual-core): Each fiber carries a single direction.

This is the standard method for 10GbE single-mode links and is simpler to implement.

Bi

Di (single-core): Uses wavelength division multiplexing (WDM) to transmit and receive on a single fiber. Requires matched A/B transceivers with opposite wavelengths (e.g., 1310 nm TX / 1550 nm RX on one end, reversed on the other),.

Bi

Di is less common for standard dual-core setups but useful when fiber availability is limited.

Installation Tips

Check module compatibility: Ensure both ends use compatible SFP+ modules (e.g., 10GBASE-LR for SMF). Use proper patch cords: Duplex LC cables are standard for dual-core single-mode fiber. Cross-connect TX/RX: Never connect TX to TX or RX to RX; the link will fail.

Distance considerations: Single-mode fiber supports long distances (up to 10 km with 10GBASE-LR), so ensure the selected module matches the required span. Test the link: Use optical power meters or switch diagnostics to verify connectivity and signal quality. By following these steps, a 10GbE single-mode dual-core fiber link can be reliably established for data center, enterprise, or long-distance networking applications.
