

Access switch cannot connect

Overview

Inter-VLAN routing often encounters issues due to misconfigured switch ports. This occurs when a connected router port is not properly assigned to the appropriate VLAN. To resolve this, begin by confirming the correct configuration of trunks using the "show interfaces trunk" command. However, the switch seems to be working fine, and the traffic is normal. Configure your computer with an IP address in the same subnet as the switch's IP, plug directly into the switch, and then you can change the switch to use DHCP or assign a valid IP address for your network. You are having problems with a switch and. A network switch failure can disrupt business operations by causing connectivity issues, packet loss, and downtime for connected devices.
