

Automatic switch distribution box

Overview

The ATS distribution box connects the primary power supply and the backup power supply. ABB offers automatic transfer switches (ATS), from 40 to 1600 Amperes in range. They have the features and functionality that makes them suitable for diverse applications: industrial plants, docks, airports and data centers. During a grid failure, the Automatic Switch Box safely disconnects the connected PV plant and the connected loads. Low-voltage automatic transfer switch assemblies provide a reliable means of transferring essential load connections between primary and alternate sources of electrical power. Data centers, hospitals, factories and a wide range of other facility types that require continuous or near-continuous. When it comes to distribution and accessories, Milton CAT is a convenient one-stop resource. Choose from our 100 amp to 3,000 amp transfer switch range. While a manual transfer switch is controlled by a human, an ATS works autonomously to provide a fast and reliable changeover.
