Campus Network Grade Optical Module QSFP28 Selection Guide

Overview

This guide provides a systematic selection process to help you choose the right QSFP28 module every time. You will learn how to verify form factor compatibility, match fiber and distance requirements, validate switch compatibility, consider thermal constraints, and avoid costly deployment mistakes. Choosing QSFP28 optical transceivers that fit your system helps. 100G QSFP28 is a hot-pluggable optical transceiver form factor designed to deliver 100-gigabit Ethernet connectivity using four parallel 25-gigabit lanes. It is widely used in data centers, enterprise core networks, and telecom infrastructure due to its high port density, standardized interface. If you're upgrading leaf–spine fabrics, stitching campus buildings, or extending metro/edge links, a reliable Optical Transceiver Module at 100 Gbps is table stakes. It uses four electrical lanes to deliver a total throughput of 103. 1 Gbps, with each lane operating at 25.
