Dedicated Composite Optical Cable

Overview

Explore optoelectronic composite cables—hybrid fiber optic and power cables engineered for efficient data and energy transmission.

Key Takeaways

A dedicated composite optical cable integrates optical fibers with power or control conductors in a single cable, enabling simultaneous high-speed data transmission and electrical power delivery.

Overview

Dedicated composite optical cables, also known as optoelectronic or optical-electric composite cables, combine optical fibers for data transmission with copper or other conductors for power or control signals within a single protective structure. This hybrid design eliminates the need for separate cables, reducing installation complexity, maintenance, and overall system costs. These cables are engineered to operate in harsh environments, including offshore installations, industrial plants, nuclear facilities, and smart infrastructure systems.

Structure and Components

Optical Fibers: Can be single-mode or multimode, supporting high-speed data transfer over long distances, often reaching terabits per second. Power Conductors: Copper or tinned copper strands designed to handle specific voltage and current requirements, providing reliable electrical supply. Shielding and Armor: Multiple layers of shielding, waterproofing, and sometimes armored jackets protect the cable from mechanical stress, radiation, or environmental hazards.

Specialized Strands: Some composite cables include coaxial lines, control pairs, or polyamide tubes for instrumentation and video transmission, particularly in robotics or inspection systems.

Applications

Industrial Automation: Powering and controlling machinery while transmitting sensor or video data. Offshore and Marine: Delivering both energy and communication to remote platforms. Nuclear and Harsh Environments: Operating inspection robots and radiation sensors in extreme conditions.

Telecommunications and Data Centers: High-density fiber bundles for LANs, SANs, and enterprise networks, often with fire-resistant or LSZH jackets.

Advantages

Space and Cost Efficiency: Combines multiple functions in a single cable. Simplified Installation: Reduces the number of separate runs and connectors. Enhanced Reliability: Designed to withstand mechanical, thermal, and environmental stresses.

High Performance: Supports high-bandwidth data alongside stable power delivery.

Customization

Manufacturers offer tailored solutions based on fiber count, conductor size, shielding type, and environmental requirements. This allows deployment in specialized applications such as inspection robots, moving video cameras, or smart grid systems. In summary, dedicated composite optical cables are versatile, high-performance hybrid cables that integrate data and power transmission, making them essential for modern industrial, offshore, and high-tech infrastructure applications.

Optoelectronic Composite Cable: Hybrid Solution for

Explore optoelectronic composite cables—hybrid fiber optic and power cables engineered for efficient data and energy transmission. Learn about types,

Composite optical cable

Find your composite optical cable easily amongst the 16 products from the leading brands (CORNING, LAPP, Cavicel, ...) on DirectIndustry, the industry specialist

Composite cables

We offer a wide range of cables, including aerial, underground, micro duct, ribbon, IO and indoor, last mile connectivity and special application cables. Composite

Optical Fibre | Prysmian

© 2026 METRA FIBER MARKET - All rights reserved

The result is a complete portfolio covering the full range of application standards, from OM1 and OM2 optical fibres, right up to high-data-rate OM3 and

Optical Hybrid Cables: A Comprehensive Guide

Optical hybrid cables offer a simple solution to an expanding issue: how to transmit bandwidth and power with efficiency. Their advantages are lower

Composite Cable | FiberTek

The CCTV composite cable is designed and used for closed circuit camera applications. CCTV composite cable connects the control system to the cameras

ActiFi® Composite Cable, Loose Tube, Indoor/Outdoor,

By integrating linear laid copper and loose-tube fiber in one cable, ActiFicables eliminate the need to install separate power and fiber cables. This saves

Hochleistungs Composite Kabel

In addition to our expertise in the production and processing of fiber composite components / assemblies, we have expanded our portfolio to include the

ActiFi Composite Cable, Loose Tube, Indoor, Plenum

By integrating linear laid copper and loose tube fiber in one cable, ActiFi cables eliminate the need to install separate power and fiber cables. This saves installation time, labor costs and duct

Power and Data in One: A Guide to Hybrid Fiber Optic

A hybrid fiber optic cable is a composite cable that integrates traditional glass optical fibers for data transmission with copper wires for electrical power. This innovative

DuetConnect™ Hybrid Cable

DuetConnect Hybrid Copper-Fiber Cables allow one cable to offer the advantages of DC power and fiber, safely delivering both over long distances to remote

Optical Fiber Composite Cables: The Backbone of

Conclusion Optical fiber composite cables represent a versatile, high-performance solution for modern communication and power distribution needs.

Copper / Fiber Composite

SCP fiber optic cable combines the performance of Corning ClearCurve® multimode OM3 with a durable, installation-ready jacket that''s perfect for residential and commercial audio-visual,

Recommendation ITU-T G.978 (05/2025)

© 2026 METRA FIBER MARKET - All rights reserved

This document outlines the specifications and characteristics of optical fiber submarine cables used in various ITU-T Recommendations. It covers cables for repeatered, repeaterless, and dedicated

Subsea Cables & Wire

We design and stock an extensive range of specialised Power, Signal, Coax, Fibre Optic and composite cables suitable for use underwater and in harsh

Fiber-optic cable

Fiber-optic cable A TOSLINK optical fiber cable with a clear jacket. These cables are used mainly for digital audio connections between devices. A fiber-optic cable,

Optical Fiber Composite Power Cable

Description: Optical fiber composite insulated power cable for low voltages (OPLC) is a new type of photoelectric composite cable for low voltage power lines, and

Composite Cable

Composite cable, also known as hybrid cable, is a type of cable that consists of both fiber optic and copper conductors. This type of cable is designed to provide the benefits of both mediums, allowing
