Dimensions and Specifications of Polish Imported Distribution Boxes

Overview

This document provides specifications for various distribution boxes including dimensions, mounting sizes, and number of ways.

Key Takeaways

Polish distribution boxes are fully customizable ventilation manifolds, with dimensions, spigot arrangements, and configurations tailored to specific installation requirements.

Overview

Distribution boxes, also known as manifolds, are used in ventilation systems to separate and direct air to different rooms and connect supply and exhaust ducts to a recuperator. Polish manufacturers like PEFLEX offer custom-made boxes that can be designed to any size and spigot arrangement, ensuring precise adaptation to the building's ventilation layout.

Dimensions and Configurations

Customizable Sizes: Boxes can be designed in any length, width, and height to fit the installation space. Number of Ways: Options range from 1-way to 36-way distribution boxes, depending on the system requirements. Spigot Arrangement: The position and diameter of spigots can be tailored to match duct connections, allowing for optimal airflow and easy integration with the recuperator.

Material and Build: Typically made from durable materials suitable for ventilation systems, ensuring long-term reliability and compliance with EU standards. Design and OrderingBoxMaker Program: PEFLEX provides an intuitive online tool to design boxes according to specific project needs, allowing users to specify dimensions, spigot positions, and other technical details. Rapid Production: Once designed and ordered, boxes can be manufactured and shipped within 24 hours, ensuring fast delivery for urgent projects.

Tailored Solutions: The approach emphasizes designing the box to fit the house rather than adapting the house to pre-made boxes, improving installation efficiency.

Additional Notes

Mounting and Installation: Detailed specifications, including mounting sizes and connection points, are provided in manufacturer catalogues, ensuring compatibility with standard ventilation components. Flexibility: Customization allows for non-standard shapes and complex configurations, making these boxes suitable for both residential and commercial ventilation systems. Polish imported distribution boxes offer high flexibility, precise sizing, and rapid delivery, making them ideal for modern ventilation installations where tailored solutions are required.
