Do fiber optic cables and routers have to be placed next to each other

Overview

Fiber optic cables should not be mixed with copper cables as the heavier copper cables can stress the fiber cables. Sometimes the fiber is hung below cable trays to protect it from masses of copper.

Key Takeaways

Fiber optic cables and routers do not need to be placed right next to each other; they can be connected via Ethernet cables over significant distances without affecting performance.

Fiber-to-

Router Connection

In a typical fiber-optic internet setup, a fiber cable runs from a terminal outside your home to an Optical Network Terminal (ONT) inside or outside your home.

The ON

T converts the light signals from the fiber into electrical signals that your router can use. The connection between the ONT and the router is made using a high-speed Ethernet cable, usually Cat6 or better, which ensures stable and fast data transfer.

Distance Flexibility

Ethernet cables connecting the ONT to the router can be up to 328 feet (100 meters) long without noticeable impact on internet speed. This means your router can be placed in a more central location in your home for optimal Wi-Fi coverage, rather than being constrained to the location of the ONT. If your home is larger, you can also use mesh Wi-Fi systems to extend coverage while keeping the router at a convenient location.

Electrical Isolation and Safety

One advantage of fiber-optic connections is that they provide electrical isolation, protecting your network from power surges and interference that can affect copper Ethernet or coaxial cables. This allows for safer and more flexible placement of network devices, including routers and switches, without worrying about electrical hazards.

Practical Recommendations

Place your router in a central, elevated location to maximize Wi-Fi coverage and minimize interference from walls, metal objects, or appliances. Use high-quality Ethernet cables (Cat6 or better) to connect the ONT to the router, especially if the distance is significant. If your ONT and router are combined in a single device, placement flexibility is limited, but otherwise, the router can be positioned independently for optimal signal distribution.

Avoid bending fiber cables beyond manufacturer recommendations to prevent signal loss or microfractures. In summary, fiber optic cables and routers do not need to be next to each other. Using Ethernet connections, you can place your router wherever it provides the best Wi-Fi coverage while maintaining a reliable high-speed connection from the ONT.

Solved: FTTP Install (ONT Placement)

I''m just looking to see if it''s worth me wiring up power to the master socket area and a network cable from there (behind walls) to the study upstairs where it can be plugged into the new

Can You Run Cable Along An Existing Cable? Answered (2024)

© 2026 METRA FIBER MARKET - All rights reserved

Is It Okay to Run Cable Along The Existing Cable?Factors to ConsiderCan You Run Network Cable in The Same Conduit as Power?How Far Apart Should I Space cables?Can I Pull The Cable Using An Existing Cable?When to Run Cable Along Existing CableIn ConclusionYes, you can run cable along an existing cable, and it doesn''t raise a safety concern. However, running two network cables closely together or parallel to each other can cause crosstalk and interference. This was true more so in the past when cables were less sophisticated than they are today, but it''s still a consideration even with high-quality c...See more on thenetworkinstallers The Fiber Optic Association

The FOA Reference For Fiber Optics - Fiber Optic Installation

Fiber optic cables should not be mixed with copper cables as the heavier copper cables can stress the fiber cables. Sometimes the fiber is hung below cable trays to protect it from masses of copper.

Best Practices for Designing Indoor Fiber Optic Routing in 2025

Ensure safe, efficient indoor Fiber Optic Routing in 2025 with expert design tips, compliance standards, and future-ready installation practices.

The FOA Reference For Fiber Optics

There is really no way to generalize on the design process for fiber to the home (FTTH) networks - or any fiber optic network for that matter - since every system is unique. If you are familiar with FOA''s

Fiber Internet Installation: Step-by-Step Guide (2026)

For a fiber optic connection, you need an optical network terminal (ONT), a router, and appropriate Ethernet connections for wired devices. Your service provider typically supplies the ONT,

How is Fiber Internet Installed? Everything You Need to Know

Explore how fiber optic internet is installed in your home, with step-by-step details on cables, ONTs, routers, and what to expect during the appointment.

FOA Standard For Installing Fiber Optic Cable Plants

Thieves often do not know the difference between copper cables which are valuable when sold for scrap and fiber optic cables which are not, so cables and other components should not be left unprotected

How to Run Fiber Optic Cable in Your House

The initial step in any internal fiber installation is precisely determining the final location for the Optical Network Terminal. This device needs a dedicated power source and should be
