

Emergency Plan for Core Switch Expansion

Overview

Presented a comprehensive action plan, including an activity schedule, prerequisites, power-down and switch replacement procedures, power-on procedures, and a detailed post-implementation check report with a contingency roll-back plan. FutureBlox successfully executed the Network Switch Replacement and Implementation activity in the client's Datacenter, delivering enhanced network performance, minimized downtime, and ensured scalability for future growth. Upgrade network switches to state-of-the-art models. However my general advice would be go with what you know - otherwise you need to learn the commaand set, read all the deisgn docs and deplyment. How do you or feel about strategies on replacing network infrastructure devices. I feel it should be done by EOL date, I was expecting to have to do this year as some cat3000 devices were EOL, they have now changed that to 2025. Once the new Device connected, configure the SVI and IP address of the interface (in shutdown mode) with brief downtime, shutdown the SVI and bring up the SVI on the new Switch. im responsible for a big network but the thing is i try to take as much as backup information incase something happens, what are things beside the usual show run that can be invaluable when the device goes down?

i try my best with the following: -show run -show cdp n -show cdp n d -show interface.
