

FC fiber optic patch cord connection to optical transceiver

Overview

A fiber patch cable is a fiber optic cable with connectors on both ends. They are also called fiber jumpers. Learn the differences in size, performance, and applications. When building or maintaining a fiber optic network, selecting the right fiber patch cable is crucial. Most network engineers and procurement personnel get confused during selection: singlemode or. A fiber optic patch cord (fiber jumper) is: Typical applications: A patch cord is the “bridge” that connects two fiber devices and lets them talk to each other. ZION Communication supplies both standard patch cords and custom assemblies to match your equipment, distance, and installation. Of the more than a dozen types of fibre-optic connectors available, the four most commonly used today are LC, SC, FC, and ST. As a network uses various connector types: LC, SC, ST, FC (to explain in short) – you can choose the best alternative.
