Fiber Optic Cable Installation in Azerbaijan

Overview

The Trans-Caspian Fiber-optic Cable project, set to establish the first fiber-optic connection between Azerbaijan and Kazakhstan, has reached a new milestone in its construction phase.

Key Takeaways

The Trans-Caspian Fiber-Optic Cable project is a major initiative connecting Azerbaijan and Kazakhstan with a 380 km high-capacity submarine fiber-optic line, expected to be completed by the end of 2026.

Project Overview

The Trans-

Caspian Fiber-Optic Cable Line is part of the Digital Silk Way initiative, aimed at creating a high-speed digital corridor between Europe and Asia through Azerbaijan. The project is implemented by AzerTelecom, Azerbaijan's leading backbone internet provider under NEQSOL Holding, in partnership with Kazakhtelecom, Kazakhstan's national telecommunications operator. The cable will connect Sumgait (Azerbaijan) and Aktau (Kazakhstan), spanning 380 km across the Caspian Sea with a data transmission capacity of up to 400 terabits per second, ensuring low-latency, high-speed connectivity.

Construction and Technical Details

The project has successfully completed the Desktop Study, a comprehensive pre-engineering analysis of the marine environment, seabed conditions, environmental factors, and potential route hazards. This study provides the foundational data for the next stages, including marine surveys, cable route engineering, and installation. Technical supervision and advisory support are provided by Pioneer Consulting, a U.

S.-based firm specializing in submarine fiber-optic systems, ensuring adherence to international engineering standards and safety benchmarks. The construction process involves multiple stages: Assessment of coastal areas and seabed conditionsDesign and production of durable, high-quality fiber-optic cablesTransportation and submarine installation along the Caspian Sea floor The project is strategically significant, forming a regional connectivity corridor that enhances digital infrastructure, supports multi-terabit data transmission, and fosters economic cooperation between Azerbaijan, Kazakhstan, and neighboring countries.

Strategic Importance

The Trans-

Caspian cable is a key component of the Digital Silk Way, providing the shortest and most efficient route for data transmission between Europe and Asia. It strengthens Azerbaijan's role as a regional digital hub, promotes technological advancement, and contributes to sustainable development in the ICT sector. Completion is expected by the end of 2026, positioning Azerbaijan at the forefront of high-capacity international fiber-optic connectivity.

Companies InvolvedAzerTelecom: Leading Azerbaijani telecom operator providing wholesale carrier-grade communications and digital services, part of NEQSOL Holding. Kazakhtelecom: Kazakhstan's largest telecommunications company, offering fixed-line, mobile, internet, and data transmission services. Pioneer Consulting: Provides technical supervision, design review, and advisory support for submarine fiber-optic projects.

This project represents a major milestone in Azerbaijan's fiber-optic infrastructure, enhancing regional connectivity and supporting the country's digital transformation goals.
