Fiber optic multimode supports 10 Gigabit Ethernet

Key Takeaways

10 Gigabit Ethernet can be deployed over multimode fiber using 10GBASE-SR SFP+ transceivers with OM3 or OM4 fiber for short-range, high-speed connections. Overview10 Gigabit Ethernet (10GbE) supports both single-mode and multimode fiber, but multimode fiber is typically used for short-distance links such as within data centers or between buildings in a campus LAN environment. Multimode fiber allows multiple light propagation paths, which can introduce intermodal dispersion, limiting the maximum distance for high-speed transmission.

Fiber Types and DistancesOM3 Multimode Fiber (50/125 µm): Supports 10GbE up to 300 meters at 850 nm using 10GBASE-SR SFP+ transceivers. OM4 Multimode Fiber (50/125 µm): Extends the reach to 400 meters at 850 nm, providing higher bandwidth and better performance for dense deployments. Legacy 62.

5/125 µm fiber: Can support 10GbE but with shorter distances and less efficiency; modern deployments favor OM3 or OM4. Transceivers10GBASE-SR SFP+ modules are the standard for multimode fiber 10GbE. They are hot-pluggable, compact, and operate at 850 nm wavelength.

These modules use duplex LC connectors and are compatible with most multimode fiber systems. Mode-conditioning patch cords may be required for certain 10GbE standards like 10GBASE-LX4 when using multimode fiber to reduce modal dispersion.

Design Considerations

Link Power Budget: Calculate the difference between transmitter power and receiver sensitivity to ensure the signal can travel the intended distance without errors. Channel Insertion Loss: Account for fiber attenuation, splice losses, and connector losses when designing the link. Network Topology: Multimode fiber is ideal for short-range connections, typically under 400 meters, making it suitable for switch-to-server or switch-to-switch links within a data center.

Compatibility: Ensure that the SFP+ modules and switches support 10GbE over multimode fiber. SFP+ ports are generally backward compatible with 1G SFP modules, but 10G SFP+ modules cannot operate in 1G-only SFP ports.

Practical Deployment

Use OM3 or OM4 fiber for new installations to maximize distance and performance. Install 10GBASE-SR SFP+ transceivers at both ends of the link. Ensure proper fiber handling and connector cleaning to minimize insertion loss.

For distances beyond 400 meters, consider single-mode fiber with 10GBASE-LR transceivers. By following these guidelines, a reliable 10GbE connection over multimode fiber can be achieved, providing high-speed, low-latency connectivity suitable for modern data center and enterprise network environments.
