Fiber optic router cannot connect to the internet wirelessly

Overview

If your router isn't connecting to the internet, here's the quick checklist: Check and secure all cables. Test the modem directly to isolate the issue. Review router settings (WAN/DNS/ISP login). When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. Whether you're relying on a wired Ethernet setup or Wi-Fi, a broken connection can stem from various causes—from simple cable issues and. These troubleshooting steps are for users who have already completed the initial setup but still cannot get internet access through their router. Checking the router's Internet Protocol (IP) address is the key starting point — it tells you whether the problem is with the router itself or the modem. You'll know this is your issue if anything that connects to your router is not getting an internet connection, or if the lights on it are flashing red; don't confuse a. It can be frustrating to find out that your internet connection has stopped working or is having a problem connecting to the router.
