Vertiv V

R Racks are designed for high-density environments, supporting servers, storage, switches, and PDUs. They come in 42U and 48U heights, widths of 600mm and 800mm, and depths of 1100mm and 1200mm, with perforated doors for airflow and high-density cable management, suitable for mission-critical applications.

ED

P Europe offers customizable server cabinets and enclosures, including chimney racks, multi-compartment co-location enclosures, and soundproof cabinets, which can be adapted for edge computing or high-density IT environments.

Key Considerations

Cooling: High-density racks require advanced cooling solutions such as cold aisle containment, in-rack CDUs, or liquid cooling integration. Power: Ensure redundant power supply and N+1 or higher redundancy for uninterrupted operation. Security: Physical access control, fire suppression, and monitoring are essential for sensitive deployments.

Scalability: Modular rack systems allow expansion without downtime, supporting evolving workloads like AI or HPC. Monaco's data centers and rack providers offer a combination of high-density capacity, energy efficiency, and secure infrastructure, making the Principality suitable for enterprise, AI, and high-performance computing deployments.
