

Honduras Fireproof Cable Tray Construction

Overview

Since 1982, VALDINOX has been designing and manufacturing wire mesh cable trays, supports, and easy-installation accessories. Since then, we have dedicated all our experience and technical...

Key Takeaways

Fireproof cable trays in Honduras are typically made from steel or stainless steel, coated for fire resistance, and designed to meet both internal and external fire safety standards.

Materials and Construction

Fireproof cable trays are commonly fabricated from high-grade steel, stainless steel (304/316), aluminum, or FRP, depending on the application and environmental conditions. For enhanced fire resistance, trays may be PVC-coated or powder-coated, with typical coating thicknesses of 1.0 mm and widths of 16 mm for tie components.

Stainless steel trays often use 0.40 mm 304-grade metal for structural elements.

Types and Dimensions

Available types include solid, perforated, ladder, wire mesh, and ventilated troughs. Side rail heights range from 35 mm to 200 mm, and cable capacity can accommodate up to 80 cables per tray section. Maximum working load is determined by tray size and material, with manufacturers providing specifications for each configuration.

Fire Resistance and Standards

Honduran fireproof cable trays are tested for “Fire Outside” (Duct A) and “Fire Inside” (Duct B) scenarios to ensure compliance with fire safety requirements. Many trays are designed to meet international standards, including UL, NF, and CE certifications, depending on the manufacturer. These tests ensure that trays maintain structural integrity and prevent cable damage during fire exposure.

Surface Finishes

Trays can be finished with hot-dip galvanization, pre-galvanization, anodization, or anti-corrosion coatings to enhance durability and fire resistance. Custom finishes are available for specific industrial or construction environments.

Suppliers and Availability

In Honduras, suppliers such as Micro Sheet Crafts and importers listed on platforms like Go4WorldBusiness provide customized, modular, and bulk fireproof cable trays. They offer technical catalogs, samples for evaluation, and support for large-scale industrial or construction projects.

Applications

These cable trays are suitable for industrial, network, and construction applications, providing reliable cable management while ensuring fire safety compliance. They are designed to withstand high temperatures and maintain cable integrity during fire incidents. In summary, fireproof cable trays in Honduras are high-quality, coated steel or stainless steel systems, available in multiple types and sizes, tested for fire resistance, and compliant with international safety standards, making them suitable for demanding industrial and construction environments.
