

How to connect the two optical ports on the switch

Overview

Application Guide: Connecting Fiber-ready Network Always integrate duplex (two strand) fiber optic cabling or higher strand counts. Most modern SFP transce.

Key Takeaways

To connect a switch with dual optical ports, use duplex fiber optic cables with compatible SFP transceivers, ensuring proper send/receive alignment and matching fiber type, mode, and wavelength. Equipment Needed SFP or SFP+ Transceivers: Choose modules compatible with your switch and fiber type (single-mode or multimode) and bandwidth (1G, 10G, or higher). Duplex Fiber Optic Cable: Use a pre-terminated LC-LC duplex cable, which has two strands for separate transmit and receive signals.

Optional L

C Couplers: If connecting two pre-terminated cables, LC couplers can join them with minimal signal loss.

Connection Steps

Insert SF

P Modules: Plug the SFP transceivers into the optical ports of both switches. Connect Duplex Fiber: Attach the duplex fiber cable, ensuring the transmit (TX) port on one switch connects to the receive (RX) port on the other, and vice versa. Check Compatibility: Confirm that both switches use the same fiber mode (single-mode or multimode), wavelength, optical power, and port speed.

Enable Interfaces: On managed switches, enable the SFP interfaces (e.g., no shutdown on Cisco switches) to activate the ports. **Verify Link:** Check the link status LEDs and use commands like show interface status to ensure the connection is active.

Additional Considerations

Topology: Decide whether the switches will be connected in a star, daisy chain, or tree topology depending on your network design. **Distance:** Ensure the fiber cable length does not exceed the maximum supported distance for the SFP modules.

Cascading Limits: Avoid cascading too many switches in series; typically, no more than four layers are recommended for performance and reliability.

Troubleshooting: If the link does not come up, verify SFP compatibility, fiber polarity, and that the correct VLANs are configured for communication. By following these steps and ensuring proper SFP and fiber compatibility, you can successfully connect switches with dual optical ports for high-speed, reliable network communication.
