How to disconnect power from a household electrical distribution box

Overview

How to Turn Off the Power to Your House Learn how to turn off the power to branch circuits or to the entire home at the main circuit breaker panel or fuse.

Key Takeaways

To safely disconnect power in a home, locate the main circuit breaker in your electrical panel and switch it to the OFF position.

Step-by-

Step Procedure1. Prepare for Safety Before touching any electrical equipment, ensure the area is dry and wear insulated gloves and safety glasses to reduce the risk of electric shock or injury. Unplug all appliances and turn off devices to prevent damage from sudden power loss.

2. Locate the Main Electrical Panel The main panel is usually inside the home and contains the primary circuit breaker, often labeled “Main” and rated for 100A, 150A, or 200A. In older homes, a fuse box may be present instead of breakers.

3. Turn Off the Main Breaker Open the panel cover carefully, avoiding contact with any exposed wires. Flip the main breaker lever firmly to the OFF position.

This action disconnects power to all branch circuits in the house. For a fuse box, remove the main disconnect or pull out the main fuse block. 4.

Verify Power is Off Use a non-contact voltage tester to confirm that electricity is no longer flowing to the circuits you intend to work on. This ensures it is safe to perform maintenance or repairs. 5.

Optional External Disconnect Some homes have an external disconnect box or a dedicated switch near the meter. This can also be used to cut power, but the main breaker inside the home is the standard and safest method for routine power shutdowns. 6.

Avoid Meter Tampering Do not attempt to remove the electric meter or tamper with the meter socket, as these conductors remain live and can cause lethal shocks. Only licensed electricians, in coordination with the utility company, should handle meter disconnections. 7.

Restoring Power After completing your work, switch the main breaker back to the ON position and plug in appliances as needed.

Key Safety Tips

Never touch bare wires or metal contacts inside the panel. Always confirm power is off with a voltage tester. If wiring is exposed or damaged, call a licensed electrician.

Use the main breaker for full-house shutdown; branch breakers are for individual circuits. Following these steps ensures that you can safely disconnect and restore power in a household electrical system while minimizing the risk of injury or equipment damage.
