How to disconnect the router from mobile fiber optic internet

Overview

This guide outlines proper methods to safely remove fiber optic cable from modems in your home or office.

Key Takeaways

You can turn off your mobile fiber optic router either by using its power button, unplugging it, or disabling Wi-Fi through the router's settings or mobile app.

Physical Power Off

Most routers have a power button located on the back or side. Pressing this button will turn off the router, and pressing it again will power it back on. If your router lacks a power button, you can unplug the power cable from the wall or the router itself.

Before doing this, save any ongoing work and disconnect devices to prevent data loss or interruptions in downloads or streaming.

Disabling Wi-

Fi Without Powering Down

If you only want to disable the wireless signal while keeping the router powered, you can do this via the router's web interface or mobile app: Access the Router Settings: Open a web browser and enter the router's IP address (commonly 192. 168. 0.

1 or 192. 168. 1.

1) or use the router's dedicated app. Log In: Enter the administrator username and password. Default credentials are often "admin/admin" or "admin/password" unless changed.

Locate Wi-

Fi Settings: Navigate to the wireless or network settings section.

Disable Wi-

Fi: Toggle off the wireless radio or uncheck the Wi-Fi option and save changes. Some routers may require a restart for the changes to take effect. Optional Scheduling: Many modern routers allow you to schedule Wi-Fi on/off times for convenience or parental control.

Using Mobile Apps

Many modern fiber optic routers come with mobile apps that allow remote management. From the app, you can: Turn off Wi-Fi or the entire router remotely. Schedule automatic shutdowns.

Monitor connected devices and manage network access.

Precautions

Avoid frequent power cycling, as it can reduce hardware lifespan. Disconnect devices or save work before turning off the router. Ensure you have login credentials if using the web interface or app to avoid being locked out.

By following these methods, you can safely turn off your mobile fiber optic router or disable its Wi-Fi according to your needs.
