

How to dissolve tail fiber

Overview

This can be done by gently crushing the dried cattails and then shaking them to remove the loose fibers. The fibers can then be further separated by hand or using a simple tool like a fork or comb. While not as soft as cotton or as smooth as silk, cat tail cloth has its own unique texture and is often used for. Using Dissolve and Dissolve-4x water-soluble stabilizer helps keep the stitches from disappearing in high-pile fabrics (such as towels of fluffy cotton) and is wonderful for lace work since it provides a firm, stable surface on which to stitch. These adhesives are unique; they need to have excellent tack when wet to increase bonding efficiency and form a tack-free film when dry to. How does the feed-in method hide elastics?

The feed-in method conceals elastics by integrating an additional hair tail through the knot so the extension hair layers forward over the band. Pull it from bend through the tail fibers to split them.
