

How to ground a double-armored optical cable

Overview

The armor is not used for shielding so there is no need to ground for that aspect. If the cable is installed outdoors the NEC does not cover it. Interlocking armor is an aluminum armor that is helically wrapped around the cable and found in indoor and indoor/outdoor cables. A complete listing. Fiber optic cable transmits data as light through glass or plastic strands, which means the fiber core itself carries no electrical current and requires no grounding. The critical distinction lies in. 1. 1 This practice provides general suggestions and recommendations for bonding the metallic armor layer of OFS loose tube optical fiber cables. 2. This Applications Engineering Note (AE Note) discusses conventional bonding and grounding practices for conductive fiber optic cable and hardware installations within the scope of the National Electrical Code (NEC).
