Huawei NS series fiber optic switches OEM

Overview

FTTH Solution Huawei electric power FTTH network solution uses all-scenario AirPON and DQ ODN solutions to simplify OLT and ODN deployment. It is the optim.

Key Takeaways

Huawei NS series fiber optic switches are high-performance enterprise-grade switches available through OEM/ODM channels, offering flexible deployment and cost-effective alternatives to standard Huawei models.

Overview of Huawei NS Series

The N

S series switches are designed for enterprise and service provider networks, delivering high throughput, low latency, and robust reliability. These switches support advanced features such as OTN/SDH integration, DWDM transmission, and optical cross-connect capabilities, making them suitable for large-scale fiber optic networks and data center deployments (Web result). OEM/ODM OptionsHuawei NS series switches can be sourced through OEM/ODM manufacturers, which provide factory-direct sales and customization options.

These manufacturers allow enterprises to obtain switches at competitive prices while maintaining the same hardware and performance as branded Huawei devices.

N

S switches are often ODM models derived from Ruijie hardware, offering identical ASIC chipsets, backplane bandwidth, and firmware logic, but at a lower cost due to flexible branding and pricing (Web result). Several suppliers and factories in China provide Huawei switch OEM/ODM services, including customization of firmware, port configurations, and optical module compatibility. These suppliers are verified and offer global shipping, making them suitable for enterprise procurement (Web result).

Fiber Optic Connectivity

Huawei N

S series switches support a wide range of fiber optic modules and jumpers, including single-mode and multimode fibers (OM1, OM2, OM3, OM4), MPO connectors for 40G/100G modules, and active optical cables (AOCs) for short-distance connections. The choice of fiber type and connector depends on the optical module and deployment distance, ensuring optimal bandwidth and minimal signal loss (Web result).

Performance and Cost Benefits

Performance: NS series switches provide nearly identical performance to Huawei-branded switches, including stable throughput and 24/7 operation. Management: NS switches often include free lifetime cloud management, while Huawei may require subscription-based iMaster NCE for advanced orchestration. Cost Efficiency: Enterprises can save up to 30% on total ownership costs by choosing NS series ODM switches without compromising reliability (Web result).

Conclusion

Huawei N

S series fiber optic switches are a reliable, high-performance solution for enterprise and service provider networks. Through OEM/ODM channels, organizations can access customized, cost-effective switches with full compatibility for fiber optic modules, advanced network features, and flexible deployment options, making them ideal for both large-scale and SMB network environments.
