

Install the core switch QSFP

Overview

Provides instructions to install and remove QSFP 28 and SFP 29 transceiver modules on your switch. See the Cisco Nexus N9348Y12C-SE1 switch datasheet on Cisco. Use only supported SFP/SFP+ modules on the platform. Refer to the Cisco Transceiver Modules. QSFPs installed in core routing blades are used for connecting inter-switch links (ICLs) between X6 Directors or between X6 and DCX 8510 Directors. Interconnecting these devices increases the number of useable ports for device connections. This device is compliant with IEC 60825-1 Amendment 2 and CFR21Section. If you use an unqualified transceiver, the switchshow command output shows the port in a Mod_Inv state. Fabric OS also logs the issue in the system error log. On Gen 6 platforms, 16Gb/s QSFPs might negotiate the link speed to 8Gb/s when connecting a breakout cable.

Core Routing Blade Transceivers

Follow these guidelines for using QSFPs when connecting ICLs. See Installing a QSFP Transceiver to install cables and QSFP transceivers. The QSFP ports on the core switch blades can be used only

Pluggable Transceivers Installation Guide

Remove any rubber dust covers from the port where you are installing the QSFP module. Holding the QSFP module by its sides, insert the QSFP module into the port on the switch or module (see

Installing a QSFP transceiver

To insert an QSFP transceiver, complete the following steps: Note: QSFP transceivers have pull tabs rather than bails. Always use the pull tab to insert or remove the QSFP transceivers, as the QSFP

Installing a QSFP Transceiver

Although installation and removal procedures are the same for QSFP transceivers installed in port blades and extension blades, these transceivers are not interchangeable between the two blade

Installing a QSFP Transceiver

To avoid this, disable and then re-enable the port that negotiated the speed to 8G, or you must connect the cable to the QSFP first and then install the QSFP into the switch.
