# KVM Switcher Linux Screen Switching Method

## Overview

This utility watches for USB device connect/disconnect events and switches monitor inputs via DDC/CI. This turns a simple USB switch into a full-fledged KVM solution: press one button on your USB switch and all your monitors connect to a different input. Altough monitor vendors provide propriatary software to switch inputs, it is often not possible to use it on Linux/MacOS, or to switch multiple monitors at once, or is. This post explains how to configure the keyboard/mouse sharing software 'barrier' with automatic display switching to accomplish full KVM switch functionality. **Unfortunately barrier does not work under 'wayland' yet. KVM switches let you control multiple computers with one keyboard, mouse, and monitor. Removed MacOS code that is integrated into Rust code now. Tired of researching?

Skip the guesswork and get expert advice tailored to your exact setup. You'll also learn when it might be time to upgrade to a more reliable, feature-packed KVM switch like Avico's. Key Points: Dual monitor setups require two video.
