

Mesh Cable Tray Components

Overview

Mesh Cable Trays | PohlCon – Partner from start to future. Mesh Cable Tray Accessories Mesh cable trays are ideal for the flexible and safe routing of cable.

Key Takeaways

Mesh-type cable trays, also known as wire mesh or basket trays, consist of modular components including straight sections, bends, tees, reducers, and mounting accessories designed for flexible cable routing and support. Core Components1.

Straight Sections: These are the primary lengths of mesh tray used to carry cables along a linear path.

They are typically made of steel, stainless steel, or aluminum, and may have finishes such as hot-dip galvanization, electro-galvanization, or powder coating for corrosion resistance. 2. **Bends and Elbows:** Mesh trays can be easily bent or connected using pre-fabricated 45° or 90° bends, allowing cables to change direction horizontally or vertically.

Some systems, like the RAD T 90, feature a larger radius to facilitate pulling larger power cables. 3. **Tees and Crosses:** These components allow branching of cable routes, enabling multiple directions from a single tray run.

The mesh design allows cables to be fed in and out easily in various directions. 4. **Reducers and Transitions:** Used to connect trays of different widths or to transition between mesh trays and other types of cable trays, ensuring smooth cable routing and load distribution.

5. Connectors and Fasteners: Mesh trays often use specialized connectors such as the Magic Connector system or clip-on designs that attach trays to struts or threaded rods without bolts and nuts, simplifying installation. 6.

Dropouts and Cable Supports: Side or center dropouts allow cables to exit the tray at specific points. Suspension tubes or trapeze hangers protect cables and maintain balanced loading. 7.

Accessories for Mounting: Components include threaded rods, clamps, and suspension kits for ceiling, wall, or floor mounting. These accessories ensure proper alignment, load support, and compliance with safety standards.

Material and Finish Considerations

Mesh trays are available in steel, stainless steel, or aluminum, with finishes tailored to the environment: Hot-dip galvanized for outdoor or corrosive environments Electro-galvanized for indoor use Powder-coated or pre-galvanized for aesthetic or moderate corrosion protection Advantages of Mesh-Type Cable Trays High ventilation for heat dissipation Flexible cable entry and exit in multiple directions Easy modification for bends, branches, and extensions Lightweight and strong for supporting various cable types Quick installation with modular connectors and minimal tools Mesh-type cable tray systems are widely used in industrial, commercial, and data center applications due to their adaptability, ease of installation, and efficient cable management.
