Methods for handling live electrical boxes

Overview

Always turn off power before working on live circuits and wear appropriate personal protective equipment (PPE). Before starting work, verify the absence of voltage using a multimeter or voltage tester. Safety is paramount in electrical maintenance and repair. Live panels contain energized busbars, breakers, and internal components that can cause electric shock, arc flash, arc blast, burns, or even fatal electrocution if proper. Navigating the dangers of handling live wire requires specific strategies to prevent an electric shock. Our tool box talks are provided by our Health & Safety Working Group and are provided for use on site to inform good safety practice. Most familiar are the power poles and electric conductor lines strung 40 or more feet above the. Whether you work in construction, manufacturing, maintenance, or an office setting, electrical hazards are present almost everywhere.
