Non-standard PoE pigtail network

Overview

PoE switches provide power only to standard PDs. Because Power over Ethernet (PoE) delivers power over the same cable as data, it's popular for powering devices such as VoIP phones, wireless access points, and security cameras. It often leads to significant savings by eliminating the need to install a separate power outlet. It uses a handshake protocol (2. From a. It is undeniable that PoE technology brings convenience to network deployment. We should also pay attention to the compatibility and safety risks caused by the proliferation of non-standard products. This is a core difference between standard PoE and non-standard PoE, identification methods and. PoE switch is designed to offer both network connection and power supply to one PoE powered device (PD) through one Ethernet cable.
