Key Takeaways

A one-to-two connector box can either be an electrical box-to-box connector for wiring or an Ethernet splitter for networking, depending on your application.

Electrical Box-to-Box Connectors

Electrical one-to-two connector boxes, such as the Southwire Adjust-It Box-to-Box Connector, are designed to join two pre-installed electrical boxes quickly without dismantling. They feature adjustable lengths, allowing one connector to replace multiple sizes of conduit nipples. Installation involves punching out knockouts in both boxes, inserting the connector ends, tightening set screws, and securing locknuts.

These connectors are typically rated for indoor use and are ideal for extending conduit lengths or connecting NEMA 1 enclosures efficiently. For multipurpose junctions, products like WAGOBOX®PRO can accommodate multiple conductors and provide strain relief, supporting up to 21 wires in various configurations.

Network/

Ethernet Splitters

For networking, a one-to-two connector box often refers to an RJ45 Ethernet splitter. These devices allow a single Ethernet cable to serve two computers or devices simultaneously. Some models, like the VizGiz RJ45 Splitter, require a USB power supply to maintain signal integrity and can support speeds up to 1000 Mbps.

They physically split the cable into two groups, enabling simultaneous connections without additional wiring. These splitters are useful when wiring is limited, but they are not a substitute for a network switch if full independent bandwidth is required.

Choosing the Right Connector

Electrical use: Choose a box-to-box connector if you need to join two electrical enclosures or extend conduit lengths indoors. Ensure compatibility with the box type and wire gauge. Networking use: Choose an Ethernet splitter if you need to share a single cable between two devices, and ensure it has power support if required for stable operation.

By identifying your application—electrical wiring or network distribution—you can select the appropriate one-to-two connector box for safe and efficient installation.
