Overview

Outdoor distribution boxes are designed to distribute electrical power safely in outdoor environments, including construction sites, renewable energy projects, events, shipyards, and utility networks. Unlike indoor panels, these boxes are engineered to withstand harsh weather, moisture, dust, and physical impacts, ensuring continuous operation in unpredictable conditions.

Key Features

Weatherproofing: Most outdoor boxes have an IP65 rating, protecting against water, dust, and environmental hazards.

Corrosion-

Resistant Materials: Enclosures are made from fiberglass or durable sheet metal, suitable for industrial, marine, and outdoor event applications. Safety Integration: Many units include circuit breakers, leakage protection, fault interrupters, and vacuum switches to prevent overloads and electrical accidents. Custom Configurations: Voltage ratings, connector types, and enclosure sizes can be tailored to project requirements, including compact designs for limited spaces.
