PLC digital relay protection

Overview

Using external relays with PLC digital input (DI) and digital output (DO) cards is a fundamental industrial automation best practice. This article explains the engineering rationale, practical applications, and decision criteria for implementing relay isolation in PLC control systems. Its modular design and powerful DIGSI 5 engineering tool provide tailored solutions. Integrate your relays easily into the network. Numeric. Protection relays in PLC and automation control panels are used to safeguard feeders, process drives, auxiliary systems, and critical plant equipment while maintaining high availability of the control system. In IEC 61439-2 assemblies, the relay must be selected not only for its protection function.
