Price of side ramp for cable trays

Overview

Lay-in modular cable ramps have one or more channels to place cable and hose in, keeping them off the floor and protecting them from wear and tear.

Key Takeaways

Cable tray side ramps typically range from $5 to $50 per meter depending on material, size, and design. Pricing by MaterialSteel ramps: $5–$25 per meter. Steel is strong, durable, and cost-effective, suitable for general-purpose indoor installations.

Aluminum ramps: $6–$30 per meter. Aluminum is lightweight and corrosion-resistant, ideal for outdoor or humid environments. Fiberglass (FRP) ramps: $10–$50 per meter.

FR

P offers high durability and chemical resistance, suitable for aggressive industrial environments. Stainless steel ramps: Typically at the higher end of the range, offering maximum corrosion resistance and long-term durability.

Factors Affecting Price

Size and Width: Wider ramps or those with multiple channels for cables cost more. Design: Interlocking or hinged ramps, ramps with textured surfaces for traction, and ADA-compliant ramps may increase the price. Accessories: End caps, connectors, and mounting hardware can add to the total cost.

Installation Complexity: Labor and supports for elevated or custom installations may increase overall expenses.

Practical Considerations

For light pedestrian traffic, simple steel or aluminum ramps are often sufficient. For heavy equipment or outdoor use, consider FRP or stainless steel for durability and corrosion resistance. Many suppliers offer modular ramps that can snap together to span longer distances, which may affect the total cost depending on the number of sections required.

By considering material, design, and installation requirements, you can estimate the total cost of a cable tray side ramp for your project.
