Pricing for Tray-type and Ladder-type Cable Trays

Overview

Cable Tray Cost Comparison Compare cable tray costs by type, material, and installation. Find the most cost-effective option for your project in this detai.

Key Takeaways

Ladder-type cable trays typically cost around $50–$150 per 2. 4-meter section depending on material, while tray-type (solid or perforated) trays vary from $40–$120 per section. Ladder-type Cable TraysLadder-type cable trays feature side rails with rungs that allow cables to enter and exit at any point, promoting airflow and preventing overheating.

They are commonly made from hot-dip galvanized steel, aluminum, or stainless steel. Standard lengths are usually 2. 4 meters, and prices for hot-dip galvanized ladder trays range from $50 to $150 per section, depending on width, load capacity, and material quality.

Accessories and fittings such as elbows, tees, and brackets are priced separately, typically $10–$50 per piece. Tray-type Cable TraysTray-type cable trays, also called solid or perforated trays, provide a continuous surface for cable support. They are ideal for smaller cables, sensitive instrumentation, or environments requiring dust protection.

Materials include galvanized steel, aluminum, and FRP composites, with prices generally ranging from $40 to $120 per 2. 4-meter section, depending on material, width, and perforation pattern. Fittings and brackets are sold separately and can add to the overall cost.

Factors Affecting Price

Material: Aluminum is lightweight and corrosion-resistant but slightly more expensive than galvanized steel; FRP is used for chemical or offshore environments. Width and Load Capacity: Wider trays or those designed for heavy-duty cables cost more. Fittings and Accessories: Elbows, tees, reducers, and brackets increase total project cost.

Installation Environment: Outdoor, offshore, or corrosive environments may require specialized coatings or materials, affecting price. In summary, ladder-type trays are generally more expensive than tray-type trays for the same length, but they offer better airflow and easier cable management for large or high-voltage installations. Tray-type trays are cost-effective for smaller cables or controlled environments.
