Small and Simple Cable Trays

Overview

Cable trays and baskets are designed to help support and route cable bundles in an organized manner along ceilings or walls. Shop for cable tray systems now.

Key Takeaways

The smallest cable trays are typically channel trays or compact wire mesh trays, designed for light-duty applications and small cable runs.

Types of Small Cable Trays

Channel Cable Trays: These are narrow, compact systems ideal for small cable quantities, control wiring, and short runs. They function more like raceways than traditional trays and are best suited for light-duty applications where space is limited. Wire Mesh (Basket) Trays: Wire mesh trays are flexible and lightweight, often used for data, telecom, and light power cables.

Their load capacity depends on wire diameter and support spacing, making them suitable for small bundles of cables. Perforated Trays: Light-duty perforated trays with ventilation holes can also be small in size, providing airflow while supporting a limited number of cables. Cable Tidy Units: For very compact setups, products like the D-Line Small White Management Box can organize cables up to 280mm in length, offering a desk-friendly solution for hiding and routing cables in tight spaces.

Dimensions and Considerations

Width: Small trays often start at around 25–50mm inside usable width for channel trays, enough for a few control or data cables.

Height/

Depth: Shallow sidewalls (20–40mm) are common in small trays, limiting vertical stacking but saving space. Material: Lightweight options include aluminium, galvanised steel, or ABS plastic for tidy units. Installation: Small trays are easy to install in confined areas, under desks, or along walls, and allow for quick cable access and modifications.

Applications

Residential or office cable management for computers, AV equipment, or gaming setups. Light industrial or commercial control wiring with minimal cable loads. Situations where space is constrained, such as under desks, inside cabinets, or along narrow walls.

Choosing the smallest cable tray depends on the number of cables, load requirements, and available space. Channel trays and compact wire mesh trays are generally the most practical for small-scale installations, while tidy boxes like the D-Line unit are ideal for very limited spaces or desktop setups.
