Technical parameters of outdoor single-mode optical cable

Overview

Single-Mode Fiber Cable Guide: Types, Specs & SelectionThis comprehensive guide explores Single-Mode Fiber Optic Cable, covering technical specifications.

Key Takeaways

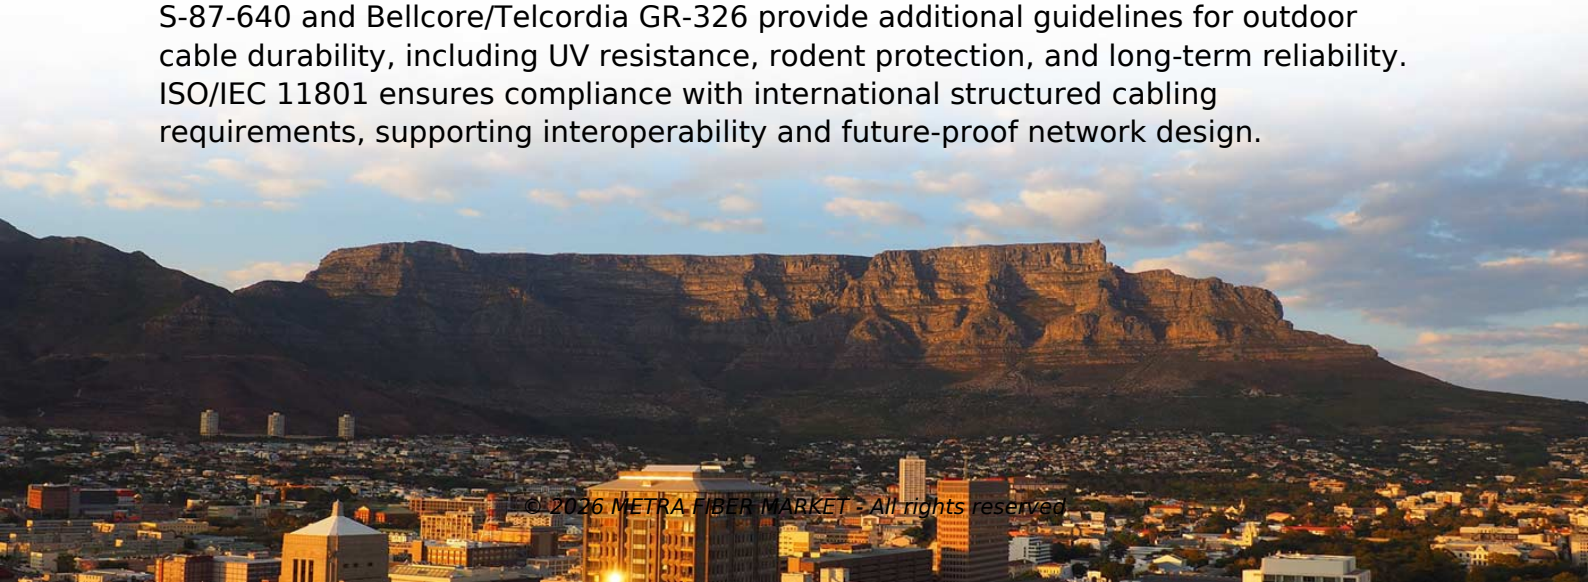

Outdoor single-mode optical cables are designed to meet ITU-T G. 652. D, IEC 60794, ANSI/ICEA, and ISO/IEC standards, ensuring long-distance performance, environmental protection, and mechanical robustness.

Key Standards for Outdoor Single-

Mode FiberITU-T G. 652. D is the global standard for single-mode fiber, specifying low attenuation and wide wavelength operation (1310 nm and 1550 nm), making it suitable for long-distance telecom, FTTH, and DWDM applications.

IE

C 60794 series defines mechanical and environmental testing for optical fiber cables, including tensile strength, crush resistance, and temperature performance. ANSI/ICEA S-87-640 and Bellcore/Telcordia GR-326 provide additional guidelines for outdoor cable durability, including UV resistance, rodent protection, and long-term reliability. ISO/IEC 11801 ensures compliance with international structured cabling requirements, supporting interoperability and future-proof network design.

Construction Features for Outdoor Deployment

Loose Tube Design: Fibers are housed in a central gel-filled tube, allowing 6–24 fibers per tube, providing flexibility and protection against environmental stress. Armor Options: ECCS steel tape armor or dielectric armor enhances crush resistance and rodent protection, especially for direct burial installations. Sheath Materials: HDPE outer jackets provide UV stability and temperature resistance for aerial, duct, or direct-buried applications.

Gel-

Free Options: Modern dry water-blocking technology eliminates messy gel while maintaining moisture protection, simplifying splicing and installation. Performance SpecificationsOS2 Designation: Indicates single-mode fiber optimized for long-distance outdoor use, with maximum attenuation of 0. 3 dB/km at 1310 nm and 1550 nm, supporting distances up to 40 km without amplification.

Bandwidth and Data Rates: OS2 fibers support high-speed transmission, including 10 Gbps and beyond, suitable for backbone and interconnect networks. Environmental Tolerance: Outdoor cables are engineered to withstand UV exposure, temperature fluctuations, and mechanical stress from aerial or buried installations.

Deployment Considerations

Aerial Installations: Self-supporting cables can be strung between poles without additional messenger wires. Duct or Microduct Systems: Air-blown or jetted installation methods allow high-density fiber deployment in protective conduits. Direct Burial: Armored cables with water-blocking features are recommended for trench or plow installations.

Summary

Outdoor single-mode optical cables combine ITU-T G. 652. D fiber, IEC mechanical standards, and ANSI/ICEA durability requirements to ensure reliable long-distance transmission in harsh environments.

Proper selection of loose tube or ribbon construction, armor type, and sheath material is critical for performance, longevity, and compliance with international standards.

Single-Mode Fiber Cable Guide: Types, Specs & Selection

This comprehensive guide explores Single-Mode Fiber Optic Cable, covering technical specifications, deployment scenarios, and best practices to help you optimize your fiber infrastructure

Recommendation ITU-T G.652 (08/2024)

This Recommendation describes a single-mode optical fibre and cable which has zero-dispersion wavelength around 1310 nm and can be used in the 1310 nm and 1550 nm regions.

Recommendation ITU-T G.652 (08/2024)

This document outlines the specifications for a single-mode optical fiber and cable designed for use around the 1310 nm zero-dispersion wavelength, suitable for both the 1310 nm and 1550 nm regions,

12 FIBER SINGLE MODE OUTDOOR OFC CABLE

This UV Stabilized outdoor cable for applications in harsh conditions. It contains a central gel -filled loose tube of a diameter of 2.0 mm for. 6 - 24 fibers. The outer sheath is made of 0.150 mm ECCS tape

Single Mode Outdoor Fiber Optic Cable (24F)

The Outdoor fiber optic cables are PBT Multi loose tube with colored fiber cores. The constructions are of water-blocking gel material with Non-Metallic Central Strength member & ECCS armoring.

Single-Mode Optical Fiber (SMF)

It can be used in all cable constructions, including loose tube, tight buffered, ribbon, and central tube designs. It supports long haul, metropolitan, access and premises applications in

OUTDOOR OPTICAL FIBER SINGLE MODE

· Description: This optical fiber cable provides high-performance transmission capabilities for various communication applications.
