My (old) home has been wired with rather long conductors inside the panel, leading to a (very) messy look and making it harder to locate conductors, change breakers etc. Is there any reason for this, or would it make sense for me. That is a PITA, because it involves plaster work after the box is in, and it's a new-work box so you have to nail it to stud. (They cost less at a real electric supply shop.) I haven't done box fill math in years.
