

The fiber optic cable position on the router turns red

Overview

That blinking red LOS light means your router has lost its connection to your internet provider's network.

Key Takeaways

A red light on your router's fiber optic port indicates a Loss of Signal (LOS), meaning your router is not receiving a proper connection from your Internet Service Provider (ISP).

What the Red Light Means

The red LOS light signals that your router has lost its connection to the ISP. This can happen even if the router itself is functioning correctly; the issue is usually with the fiber optic signal or its connection to the router.

Common Causes

Fiber Optic Cable Damage: Physical cuts, bends, or kinks in the fiber cable can disrupt the signal. **Loose or Improper Connections:** The fiber cable may not be fully seated in the router's WAN/ONT port, or connectors may be faulty. **Service Outage:** ISP maintenance or local outages can temporarily cut your internet signal.

Faulty Router or ON

T: Malfunctioning hardware can prevent proper signal reception. Power Issues: Fluctuations or interruptions in power supply can affect the router's ability to maintain a connection.

Troubleshooting Steps

Check for ISP Outages: Visit your ISP's website or social media pages to see if there is a known service disruption. Inspect the Fiber Cable: Look for visible damage, ensure there are no sharp bends, and confirm the cable is securely connected to the router. Reconnect the Cable: Unplug the fiber cable and plug it back in firmly until you feel a click.

Restart the Router: Power off the router, wait 30 seconds to 2 minutes, then turn it back on to reset the connection.

Check Router and ON

T Hardware: If the red light persists, the issue may be with the router or ONT, which may require replacement or professional inspection.

Additional Tips

Avoid tightly coiling the fiber cable, as small loops can attenuate the signal. Ensure the router is not overheating; allow it to cool if necessary. If all local checks fail, contact your ISP for further diagnostics and potential equipment replacement.

By following these steps, you can often restore your internet connection and resolve the red LOS light issue without replacing expensive equipment.
