There is a fiber optic cable near the house

Overview

Complete guide to safely running internal fiber optic cable. Learn the methods for a high-performance, future-proof home network.

Key Takeaways

If there is a fiber optic cable near your house, you may be able to access high-speed broadband, either through Fibre to the Cabinet (FTTC) or Fibre to the Premises (FTTP), depending on your location and provider.

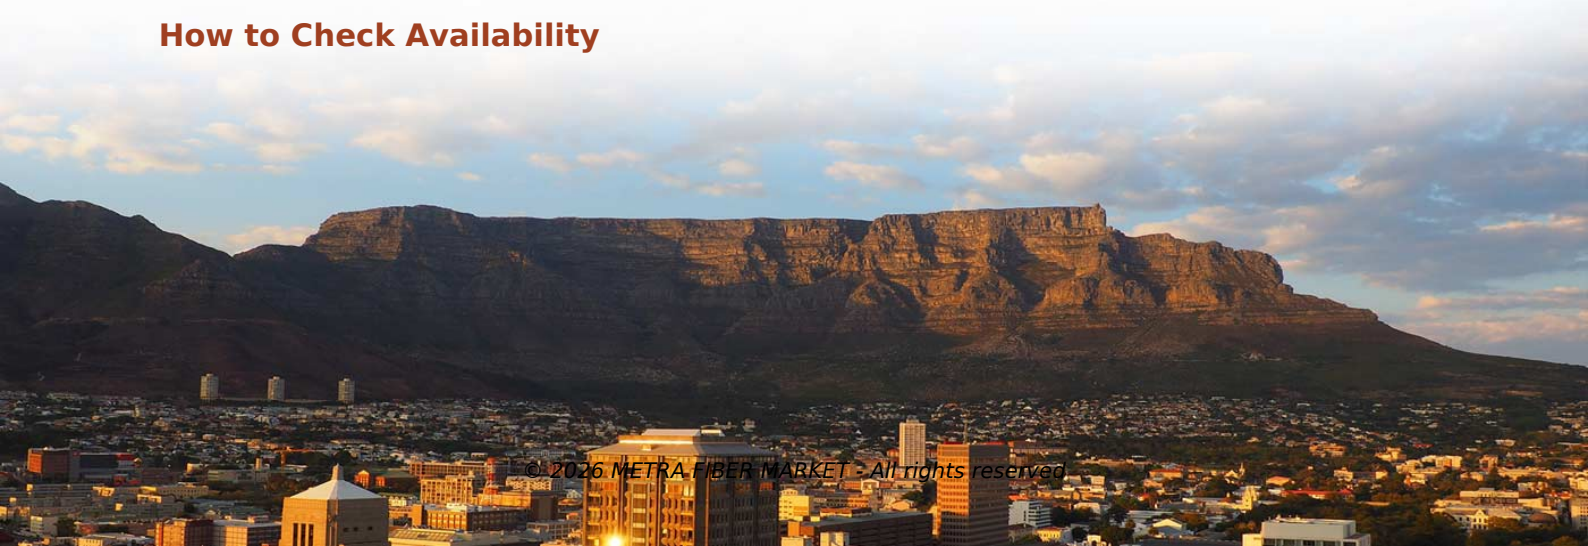
Understanding Fiber Broadband

Fiber broadband uses fiber optic cables to transmit data as light, offering faster speeds and more reliable connections than traditional copper lines. There are two main types: FTTC (Fibre to the Cabinet): Fiber runs to a street cabinet, then copper wires connect to your home. Speeds typically start around 35 Mbps.

FTT

P (Fibre to the Premises) or Full Fibre: Fiber runs directly into your home, providing higher speeds, often 75 Mbps and above, and future-proofing your connection.

How to Check Availability



© 2026 METRA FIBER MARKET - All rights reserved

To confirm if your home can access fiber broadband: Use Online Checkers: Enter your postcode and address on tools like the Openreach Fibre Checker or Broadband.co.uk FTTP checker to see which services are available. Look for Installed Equipment: If an Optical Network Terminal (ONT) is present on your property, your home is likely fiber-ready. Check Your Contract or Router: Your broadband bill or router may indicate whether you already have FTTC or FTTP service.

Contact Providers: If uncertain, your internet provider can confirm availability and expected installation timelines.

Additional Considerations

Rollout Plans: Even if fiber is nearby, full fiber may not yet be available at your address. Providers often prioritize areas based on feasibility and permissions, and rollout can take time.

Future-

Proofing: Upgrading to FTTP ensures your home is ready for the UK's planned copper network switch-off in 2027. Multiple Providers: Some areas may have access to multiple fiber networks, giving you options for speed and pricing. By checking your address with official tools and contacting providers, you can determine the type of fiber service available and plan for installation or upgrades.
