Voice-activated switch module 220V without light control

Overview

Feature: 1. After the module is triggered by the sound, there is output, the output automatically turns off after 10 seconds delay.

Key Takeaways

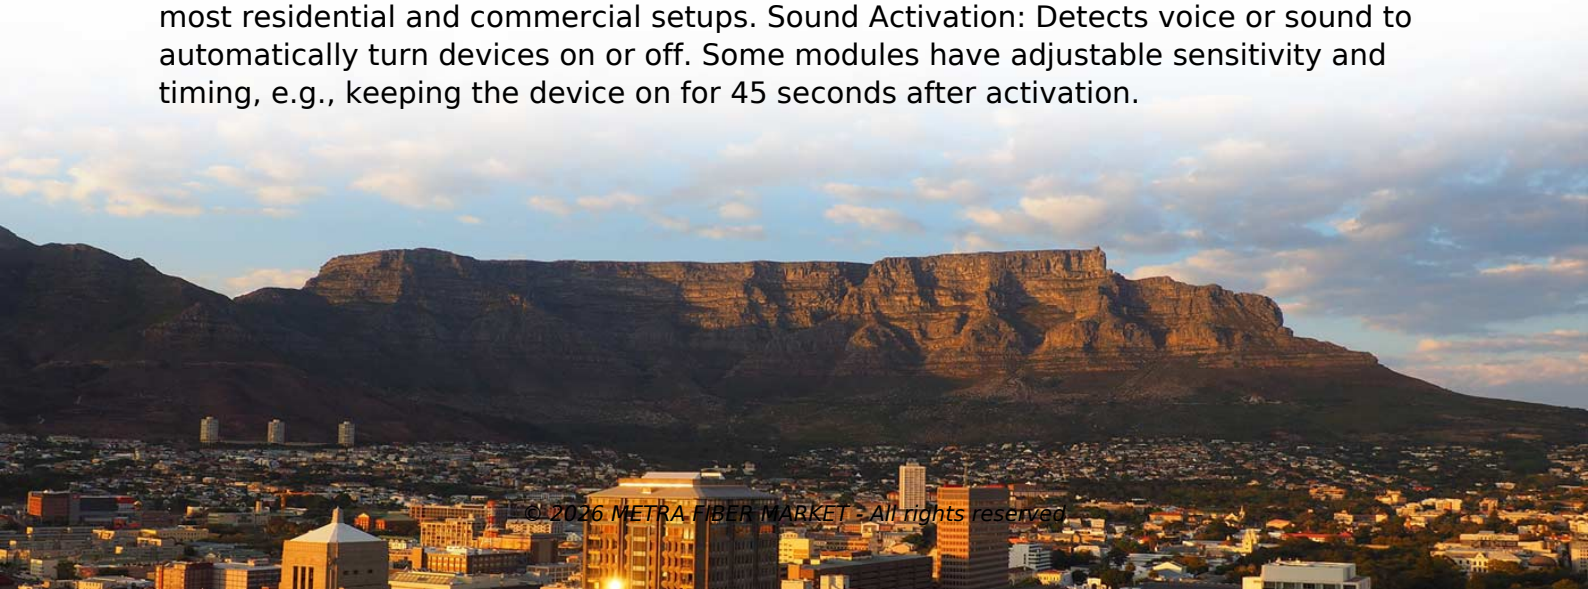

You can use a 220V voice-activated switch module or sound sensor relay that controls appliances without requiring light-specific functionality.

Overview

A voice-activated switch module for 220V systems allows you to control electrical devices using sound or voice commands. Unlike standard light switches, these modules can operate any connected appliance, making them suitable for fans, pumps, or other household devices. They are ideal for hands-free operation, accessibility, and energy efficiency.

Key Features220

V Compatibility: Designed to work with standard 220V AC power systems, suitable for most residential and commercial setups. Sound Activation: Detects voice or sound to automatically turn devices on or off. Some modules have adjustable sensitivity and timing, e.g., keeping the device on for 45 seconds after activation.

Compact Design: Small modules can be installed inside junction boxes or behind existing switches, without requiring a neutral wire in some models. Smart Integration: Certain modules, like Tuya Zigbee relay modules, support app control, voice assistants (Alexa, Google Assistant), scheduling, and group control. Energy Efficiency: Automatically turns devices off when not needed, reducing electricity consumption.

Durability and Safety: High-quality, heat-resistant components with CE or ETL certification ensure safe operation.

Installation and Use

Wiring: Connect the module inline with the device you want to control, following the manufacturer's instructions. Some modules do not require a neutral wire, simplifying installation. Activation: The module responds to sound or voice commands.

For example, clapping, speaking, or other noises can trigger the switch. Optional Smart Features: If using a smart relay module, you can configure timers, schedules, or integrate it with a smart home system for remote control.

Recommended Options

Tuya Zigbee 220V Smart Switch Relay Module: Supports voice control, app control, and does not require a neutral wire. Sound Voice Sensor 220V Module: Automatically turns devices on/off based on sound detection, suitable for hallways, bathrooms, or appliances. These modules provide a versatile solution for controlling 220V devices without light-specific functionality, making them suitable for a wide range of home automation or accessibility applications.
