Warranty for Active Optical Equipment QSFP28

Overview

100G QSFP28 Active Optical Cable with DDM (0.5-100m)Our 100G QSFP28 active optical cable is CE and RoHS certified and compliant with product safety standar.

Key Takeaways

QSFP28 Active Optical Modules (AOCs) typically come with vendor-specific warranties, which can be verified through the manufacturer or authorized distributor. Typical Warranty CoverageQSFP28 AOCs, such as those from Amphenol and Siemon, are generally covered under a limited warranty that protects against manufacturing defects and premature failure under normal operating conditions. Coverage usually includes: Replacement or repair of defective modules.

Support for interoperability issues if the module fails to meet specifications. Warranty periods often range from one to three years, depending on the vendor and purchase agreement.

Factors Affecting Warranty

Authorized purchase: Warranty is valid only if the module is purchased from an authorized distributor or directly from the manufacturer. Proper usage: Modules must be used according to specifications, including supported fiber types, link lengths, and compatible devices. Firmware and device compatibility: Some modules, like Huawei QSFP28, require specific device firmware versions to function correctly; using unsupported firmware may void warranty.

How to Verify Warranty Status

Check the vendor portal: Most manufacturers provide an online tool to verify warranty using the module serial number. Contact support: Reach out to the manufacturer's technical support or authorized distributor with the module part number and serial number. Review purchase documentation: Original invoices or purchase orders often indicate warranty start and duration.

Additional Considerations

Digital Diagnostic Monitoring (DDM): Many QSFP28 AOCs include DDM, which can help monitor module health and may be required for warranty claims. Hot-swappable and high-density design: Proper installation and handling are important to maintain warranty eligibility. Vendor-specific programs: FS offers the FS Assured Program for transceivers, which may include warranty and replacement guarantees.

In summary, to confirm if a QSFP28 Active Optical Module is still under warranty, you should locate the serial number, check the manufacturer's warranty portal, and ensure the module has been used according to specifications. Contacting the vendor directly is the most reliable method to verify active warranty coverage.
