Waterproofing of Distribution Box Cover Plate

Overview

Selecting the appropriate distribution board cover requires evaluating technical specifications against application requirements. IP ratings are paramount - IP65 provides dust-tight protection and resistance against low-pressure water jets, while IP67 offers temporary immersion. In outdoor environments, ensuring that a waterproof distribution box remains steady against wind or vibration depends on the integrity of the connection between the support plate and the fixed support rods. This technical guide outlines the professional steps for a secure, long-lasting assembly. (3). Global Recycled Standard (GRS) certified products contain recycled content that has been independently verified at each stage of the supply chain, from the source to the final product and meet social, environmental, and chemical requirements. They can be mounted vertically or horizontally with 3 insert combinations. These covers accommodate Standard Toggle Switches, Duplex Receptacles, Decora®.
