What OLT is used for a 48-core optical cable

Overview

The OLT Line Card is the core functional unit, housing the optical transceivers and the MAC layer processing required to manage dozens of PON ports and thousands of ONTs. High-end OLTs must support unified service blades capable of handling GPON, XGS-PON, and future. In the age of fiber-to-the-home (FTTH) and ultra-broadband connectivity, the Optical Line Terminal - or OLT - is one of the most crucial devices powering our high-speed digital world. To truly understand how an optical access network functions, you must know what each acronym stands for and what role it. An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service provider endpoint of a passive optical network. In. The Passive Optical Network (PON) is the indispensable foundation for delivering ubiquitous, multi-gigabit broadband connectivity, a necessity for modern economies and residential life.
