

What are some examples of single-core pigtails used in China and Africa

Overview

Learning About Single Core Fiber Optic Pigtail: Grades, Material. A single core fiber optic pigtail is a short-length optical fiber with a factory-instal.

Key Takeaways

Common single-core fiber optic pigtails include SC, LC, FC, and APC types, widely used in China and Africa for telecom, FTTH, and data center applications. Common Types and Connectors SC (Subscriber Connector) Pigtails: Square push-pull connectors, often used in FTTH and telecom networks.

Available in UP

C (Ultra Physical Contact) and APC (Angled Physical Contact) variants, with APC offering lower back reflection for high-speed, long-distance transmission.

L

C (Lucent Connector) Pigtails: Small form factor, duplex-friendly, commonly used in data centers and high-density applications.

F

C (Ferrule Connector) Pigtails: Screw-type connectors providing secure connections, often used in lab or testing environments.

UP

C vs APC: UPC pigtails have flat end faces with low insertion loss, while APC pigtails have an 8° angled ferrule to minimize back reflection, making them ideal for FTTH, CATV, and 5G networks. Fiber and Jacket Specifications Single-mode fiber: Typically 9/125 µm, suitable for long-distance and high-speed applications. Jacket materials: LSZH (Low Smoke Zero Halogen) is common for indoor use, providing fire safety and minimal toxic fumes.

Length: Standard pigtails are often 1.5 meters (4.92 feet), but lengths can vary depending on installation needs.

Applications in China and Africa

China: Single-core pigtails are widely manufactured and used in FTTH deployments, telecom networks, and data centers. Chinese suppliers provide SC/UPC, SC/APC, LC/UPC, and LC/APC pigtails for both domestic and international markets. Africa: Many African telecom operators import Chinese single-core pigtails for FTTH, broadband, and 5G backhaul networks.

SC/APC and LC/APC pigtails are preferred for long-distance, low-reflection applications, while SC/UPC is common for shorter indoor connections.

Key Considerations

Connector type should match the equipment (e.g., SC ports require SC pigtails). Polish type affects return loss: APC (-60 dB or better) is preferred for high-speed networks. Single-mode vs multimode: Single-core single-mode pigtails are ideal for long-distance and high-speed transmission, while multimode is used for shorter distances.

Simplex vs duplex: Single-core pigtails are typically simplex, used for splicing into fiber panels or ODFs. In summary, SC, LC, and FC single-core pigtails with UPC or APC polish are the most common examples used in China and Africa, supporting FTTH, telecom, and data center networks with high performance and low signal loss.
