

What is a channel steel cable tray

Overview

A Channel Cable Tray is a compact, one-piece, U-shaped support system, typically 1-3/4" deep, designed to carry a single power cable or multiple smaller cables like instrumentation, data, and control wires. It's the go-to solution for precise, point-to-point cable routing. It is commonly furnished in 4" or 6" widths, creating a compact and unobtrusive profile. Its design philosophy is centered on simplicity and direct application, offering two primary. T&B channel tray systems are fabricated from a corrosion-resistant metal (low-carbon steel, stainless steel or an aluminum alloy) or from a metal with a corrosion-resistant finish (zinc or epoxy). The choice of material for any particular installation depends on the installation environment. A cable tray is a unit, or set of units, with their fittings forming a rigid structure to support cables and assist in channeling them. The cable trays consist of a thin metallic plate and electro-welded steel rods.
