What is the longest hanger of a cable tray

Overview

Ultimate Guide to Cable Tray Hanging Systems: Choice and InstallationGet to know how to select and install cable tray hanging systems. This guideline addre.

Key Takeaways

The longest commercially available cable tray hangers can reach up to 98 inches (8'2") in length, typically using trapeze-style supports for heavy-duty applications.

Types and Maximum Lengths

Trapeze Hangers: These are the most common for long spans and heavy loads. They use two vertical rods and a horizontal cross member to support the tray. Standard lengths include 12", 16", 22", 28", and up to 98 inches for large conduit or cable bundles (nVent Caddy CCT125).

Trapeze hangers allow stacking multiple trays and provide excellent stability for industrial or data center installations. Single Rod Hangers: Suitable for lighter loads such as network or fiber cables. These typically use a single threaded rod and are faster to install but are limited in span and load capacity.

Wall Brackets and L-

Brackets: Used when ceiling space is limited or obstacles exist. Maximum horizontal reach depends on the bracket design, usually up to 12–22 inches for standard L or C brackets.

Recommended Spacing and Load Considerations

For heavy power cables, supports should be spaced 1. 5 meters (≈5 feet) apart, holding 150–200 kg per span. For medium loads, spacing can extend to 2 meters (≈6.

5 feet). For light cables like fiber or computer wiring, spacing up to 3 meters (≈10 feet) is acceptable. Longer hangers reduce the number of supports needed but require careful consideration of load, material strength, and vibration.

Diagonal sway bracing is recommended for rods longer than 6–9 meters to prevent swinging.

Material and Finish

Indoor dry areas: Electro-galvanized steelOutdoor or wet areas: Hot-dip galvanized steelChemical or food environments: Stainless steel Matching the hanger material to the tray and environment prevents corrosion and ensures long-term stability.

Summary

For the longest cable tray spans, trapeze hangers up to 98 inches are available, providing robust support for heavy or multiple trays. Proper spacing, material selection, and bracing are critical to maintain safety and prevent sagging or swinging. Single rod or wall-mounted hangers are suitable for lighter loads or constrained spaces, but trapeze systems remain the preferred choice for maximum length and stability.
