What s the best thing to put on the pigtail reel

Overview

The main use for backing is on fly reels. Fly line is super thick and you can only fit around 25 yards on the reel.

Key Takeaways

For optimal performance, use braided line on the pigtail reel with a monofilament or backing layer underneath to prevent line twist and maximize casting distance. Recommended Setup1. Braided Line as Main Line: Braided line is strong, thin, and highly sensitive, making it ideal for pigtail reels, especially in saltwater or when targeting larger fish.

2. Monofilament or Backing Layer: Adding a layer of monofilament or backing under the braid helps fill the spool, reduces line slippage, and prevents the braid from digging into the spool during casting. 3.

Proper Spooling Technique: Attach the backing or mono first, filling the spool to about 1/8 inch from the rim. Tie the braid to the backing using a secure knot, such as an arbor knot, or use tape for beginners. Keep tension on the line while spooling to avoid loose coils and line twist.

Ensure the line comes off the supply spool in the correct direction to achieve a “zero-twist” state, which prevents tangles and improves casting. 4. Optional Line Conditioning: For monofilament, soaking the line in warm water or using a line conditioner can reduce memory and make it easier to spool neatly.

Fluorocarbon lines are less affected by soaking but should still be handled carefully to avoid kinks.

Additional Tips

Match the line type and strength to your fishing environment and target species. Braided lines are excellent for heavy cover or deep water, while monofilament or fluorocarbon may be better for finesse or clear-water fishing. Regularly check the line for wear and replace it as needed to maintain performance.

Avoid overfilling the spool, which can cause backlash or line frap-ups during casting. By combining braid with a monofilament backing and following proper spooling techniques, your pigtail reel will perform efficiently, reduce line twist, and provide maximum casting distance.
