What type of faceplate is best for fiber optic cables

Overview

The Ultimate Guide to Fiber Optic Faceplate TechFiber Optic Faceplate Features at a Glance To help you choose the right product, we've created a table that.

Key Takeaways

Select a fiber optic faceplate based on your connector type, number of ports, and mounting preference to ensure proper termination and protection of your fiber cable.

Connector Type

Fiber optic faceplates are designed to accommodate specific connector types such as SC, LC, or ST.

S

C connectors are common in residential FTTH setups, while LC connectors are smaller and often used in duplex configurations. Ensure the faceplate you choose matches the connector type of your fiber cable to maintain signal integrity and ease of connection.

Number of Ports

Faceplates come in single-port, dual-port, or multi-port (4–8 ports) configurations. Single-port: Ideal for homes with a single fiber service. Dual-port: Supports backup or dual services.

Multi-port: Suitable for larger buildings or network distribution points where multiple connections are needed. Mounting StyleFlush-mounted (86-type): Fits into standard wall boxes for a seamless, professional look. Surface-mounted: Attaches directly to the wall, easier to install but more visible.

Choose based on your wall structure and aesthetic preference.

Additional Features

Modern fiber faceplates often include: Modular design for different adapter types. Built-in shutters to protect unused ports from dust and damage. Angled mounts to maintain the fiber's minimum bend radius and prevent signal loss.

Flame-retardant materials like ABS for safety and durability.

Recommendations

For a typical residential installation: Use a flush-mounted 86-type faceplate with SC or LC adapters. Choose pre-installed adapters if you want a ready-to-use solution, or empty panels if you plan to customize. Ensure the faceplate supports the number of fiber connections you need now and in the future.

By selecting a faceplate that matches your connector type, port requirements, and mounting preference, you ensure a clean, protected, and high-performance fiber optic installation.
