Why is it called a butterfly-shaped optical cable

Overview

Origin and Classification of Butterfly Optical Cables Butterfly optical cables are named for their cross-sectional shape resembling a butterfly. They featu.

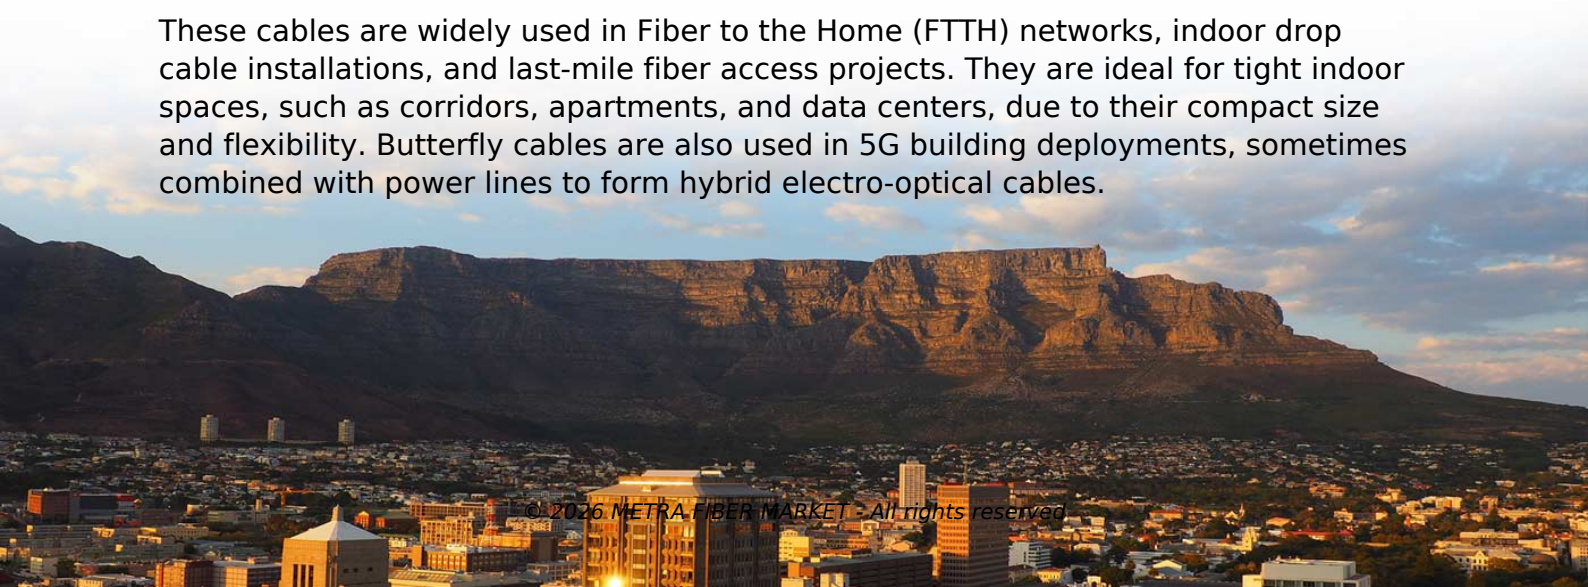

Key Takeaways

A butterfly-shaped optical cable is a flat, compact fiber optic cable with a cross-section resembling a butterfly, designed for efficient indoor and FTTH network installations. Structure and DesignButterfly-shaped optical cables are named for their cross-sectional shape, which resembles a butterfly. They typically feature a flat profile with optical fibers placed at the center and reinforced by parallel strength members on both sides, often made of FRP (fiber-reinforced plastic) or steel wire for tensile strength.

The outer sheath is usually LSZH (low-smoke zero halogen) or PVC, optimized for indoor safety and flexibility. This flat geometry prevents rolling and twisting during installation, making routing along walls, corners, and conduits easier.

Applications

These cables are widely used in Fiber to the Home (FTTH) networks, indoor drop cable installations, and last-mile fiber access projects. They are ideal for tight indoor spaces, such as corridors, apartments, and data centers, due to their compact size and flexibility. Butterfly cables are also used in 5G building deployments, sometimes combined with power lines to form hybrid electro-optical cables.

AdvantagesSpace-saving and flexible: The flat, compact design allows installation in confined spaces without compromising performance. High bandwidth: Supports high-speed data transmission, often up to 100 Gbps, suitable for modern broadband networks. Easy installation: The flat shape simplifies routing and reduces labor costs, while the cable is resistant to bending stress.

Durable and safe: LSZH jackets improve fire safety, and the cable is resistant to electromagnetic interference, water, and rodent damage. Reliable performance: Bend-insensitive fibers like G. 657A1 or G.

657A2 reduce signal loss in tight indoor routing.

Variants

Invisible butterfly drop cable: Designed for indoor installations without affecting interior decoration, ideal for FTTR (Fiber to the Room) networks. 5G butterfly optical cable: Small-diameter cables used in 5G building deployments, often combined with power lines. Side-by-side and weather-resistant variants: Allow separate transmission of TV and data signals or long-span outdoor deployment.

SummaryButterfly-shaped optical cables combine compact design, mechanical strength, and high-performance fiber transmission, making them a preferred choice for indoor fiber networks, FTTH installations, and modern high-speed data applications. Their unique flat, butterfly-like structure enhances installation efficiency, reduces bending stress, and supports reliable, high-speed data delivery in constrained spaces.

Article Content

Origin and Classification of Butterfly Optical Cables

Butterfly optical cables are named for their cross-sectional shape resembling a butterfly. They feature advantages such as small outer diameter, light weight, low cost, reliable performance, and easy

Four -end connection methods of butterfly -shaped

Butterfly-shaped optical fiber cables, also known as ribbon fiber optic cables, are a type of fiber optic cable that contains multiple fibers within a single

FTTH Butterfly Optic Cables: Practical Design, Installation, and ...

FTTH Butterfly Optic Cables, also known as flat drop fiber cables, feature a compact flat profile with optical fibers placed at the center and reinforced by parallel strength members on both

Introduction of FTTH Drop Fiber Cable and its future development

© 2026 METRA FIBER MARKET - All rights reserved

The FTTH Drop Fiber Cable is also called butterfly optical cable because it looks like a butterfly in cross section. It has the advantages of small outer diameter, light weight, low cost, reliable performance,

FTTH Butterfly Optic Cables: Revolutionizing Fiber-to-the-Home ...

The term “butterfly” in FTTH butterfly optic cables refers to their distinctive structural design. Unlike traditional fiber optic cables, butterfly cables feature a flat, ribbon-like configuration

Why Need Drop Cable For Your Outdoor FTTx Projects

Drop cables, also known as butterfly optical cables, are a revolutionary type of user access cable design to provide seamless connectivity in various environments.

Butterfly cables, Butterfly fiber optic cables

Butterfly Fiber optic cables are specifically designed for use in indoor environments, often in confined spaces such as inside buildings or data centers. They are named for their flat, strip-like shape, which

Butterfly-shaped optical cable laying method

FTTH Butterfly Optic Cables are specifically designed to meet the growing demand for high-speed fiber-to-the-home deployments. Their flat, butterfly-shaped structure combines optical fibers with strength

Types of butterfly-shaped optical fiber cables include

The name comes from the cross-section: a flat, wing-shaped profile with the optical fiber sitting in the center and two parallel strength members flanking it on either side. Whether in data centers, home

The transmission distance of the butterfly -shaped

Introduction:The butterfly-shaped optical cable is a type of fiber optic cable that is widely used in telecommunications networks, data centers, and

Indoor butterfly -shaped optical cable advantage disadvantage

An indoor butterfly-shaped optical cable is a type of fiber optic cable designed for indoor use. It is named after its unique shape, which resembles that of a butterfly. In this essay, we will examine

Four -end connection methods of butterfly -shaped optical fiber optic ...

Butterfly-shaped optical fiber cables are a popular type of fiber optic cable that is commonly used for data transmission in telecommunication networks. They are called butterfly

© 2026 METRA FIBER MARKET - All rights reserved

Four -end connection methods of butterfly -shaped optical fiber optic cable

Butterfly-shaped optical fiber cables, also known as ribbon fiber optic cables, are a type of fiber optic cable that contains multiple fibers within a single flat ribbon. This design allows for easy

Butterfly -shaped optical fiber optical cable side connection method

Butterfly-shaped optical fiber cables are a popular type of fiber optic cable that is commonly used for data transmission in telecommunication networks. They are called butterfly-shaped due to their

Butterfly Indoor FTTH Drop Cable

Butterfly FTTH drop cable is a popular type of fiber access optical cable, according to the different application environment and laying conditions, it has reasonable design of cable structure and

FTTH Butterfly Optic Cables: Practical Design, Installation, and ...

Learn how FTTH Butterfly Optic Cables improve fiber-to-the-home installations with flat design, easy routing, and reliable performance.

Butterfly leather line optical cable

The Butterfly leather line optical cable, also known as a butterfly ribbon cable, is a type of fiber optic cable that offers several advantages over traditional optical cables. In this response, I will

GJYXFHS Pipeline Butterfly-shaped Introduction Optical Cable

Pipeline Butterfly-shaped Introduction Optical Cable is engineered for efficient conduit entry of optical cables, offering robust performance and durability.
