

Why is my 100M fiber optic communication only showing 4M

Overview

- Solutions: Use optical amplifiers or repeaters to boost signal strength, optimise cable routing to minimise signal attenuation, upgrade to higher quality fibre optic cables with lower attenuation coefficients. When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. This guide will walk you through diagnosing and resolving common fiber network issues efficiently.

Why Do Fiber Networks Fail?

Despite their robustness, fiber networks can fail due to:. In today's hyper-connected world, fiber optic networks serve as the backbone of global communications, enabling everything from 5G mobile networks to hyperscale data centers. With their ability to transmit data at speeds up to 1.2Tbps over thousands of kilometers, fiber optics have outperformed. Problems within a fiber link can occur due to a wide variety of reasons. A very common problem is that a connector is not fully engaged - often hard to notice in a crowded patch panel.
