Zambia Power Distribution Box Company

Overview

Zampower is a proudly Zambian power distribution company, delivering consistent, round-the-clock, electricity to households, businesses, and industries across the country.

Key Takeaways

Zambia's electricity distribution is primarily managed by ZESCO, the government-owned utility, which operates a nationwide network delivering power to residential, commercial, and industrial customers. Key Distribution PlayersZESCO Limited is the largest power transmission, distribution, and supply company in Zambia, responsible for delivering electricity across the country through a network spanning over 56,000 km. It operates as a vertically integrated utility, managing generation, transmission, and distribution, with specialized directorates for each function.

The Distribution and Customer Services (D&CS) directorate handles the last-mile delivery to households, businesses, and other entities. Other distribution companies include: Copperbelt Energy Corporation (CEC): Primarily serves mining companies in the Copperbelt and provides wheeling services to other players, including ZESCO. Northwestern Energy Corporation (NWEC): Distributes electricity to non-mine sites in Solwezi and surrounding townships.

Distribution InfrastructureZESCO's distribution network includes substations, transformers, and power lines that step down high-voltage electricity from transmission lines to usable voltages for homes and businesses. The network supports both grid-connected and off-grid customers, with some private and industrial plants operating independently of the national grid. The country's electricity supply is largely hydroelectric, with over 90% of generation from hydropower, supplemented by solar, coal, and biomass sources.

Independent Power Producers (IPPs) contribute to generation but sell electricity to ZESCO under Power Purchase Agreements, which is then distributed through the national network.

Local Innovations and Renewable Integration

Zambia has been expanding its renewable energy capacity through solar and small hydro projects. Notable examples include the Itimpi Solar Power Station (60 MW) and Riverside Solar (33 MW), which feed into the national grid and are distributed to end-users via ZESCO's network. Programs like the Renewable Energy Feed-in Tariff (REFiT) and GET FiT encourage private investment in renewable generation, which is then integrated into the distribution system.

Summary

In essence, Zambia's “own power distribution box” is represented by ZESCO's extensive distribution network, supported by other regional distributors like CEC and NWEC. The system ensures electricity reaches residential, commercial, and industrial users, while integrating renewable energy sources and independent power producers to enhance reliability and coverage across the country.
